AIR SOLUTIONS
AIR CON SYSTEMS

Your space. Your comfort.

A practical checklist for your air conditioning consultation.

01 Describe your room

Note the room length, width and ceiling height. Tell us whether the space is open plan and how it connects to adjoining rooms.

02 Consider sunlight and daily use

Include window sizes, the direction they face and the time of day the room is used. Note the usual number of people and heat-producing equipment.

03 Think about indoor placement

Identify possible wall positions, furniture locations and access for cleaning. Your installer will assess airflow, mounting and clearances.

04 Plan the outdoor location

Note potential outdoor positions and access. Ask your installer to assess the pipe route, drainage, electrical requirements and service clearances.

05 Prepare for the conversation

Bring room measurements, a floor plan or photos, and any existing equipment details. Let us know your preferred timing and any project constraints.

Ready to take the next step? Contact Air Solutions to discuss capacity, available options and installation planning. Final equipment selection and installation requirements should be assessed by a qualified professional.
